

1

pre-search pruner

24 luma descriptors

8 causal context

4 qp and position

36

$$p_{\text{none}} > \tau_{\text{none}}$$

yes

only NONE is evaluated

no

$$p_{\text{split}} > \tau_{\text{split}}$$

yes

only SPLIT: NONE, HORZ, VERT,
AB and 4-way are skipped

no

$$p_{\text{rest}} < \tau_{\text{rest}}$$

yes

HORZ and VERT off, and
AB and 4-way by dependency

no

NONE is evaluated: its rate,
distortion and RD cost

2

post-NONE pruner

the same 36 attributes

3 log RD of NONE

39

$$p_{\text{ext}} < \theta_{\text{size}}$$

yes

AB and 4-way off

no

the enabled candidates are evaluated
